

711 Seven Eleven
Mobile Satellite Services
by RRsat

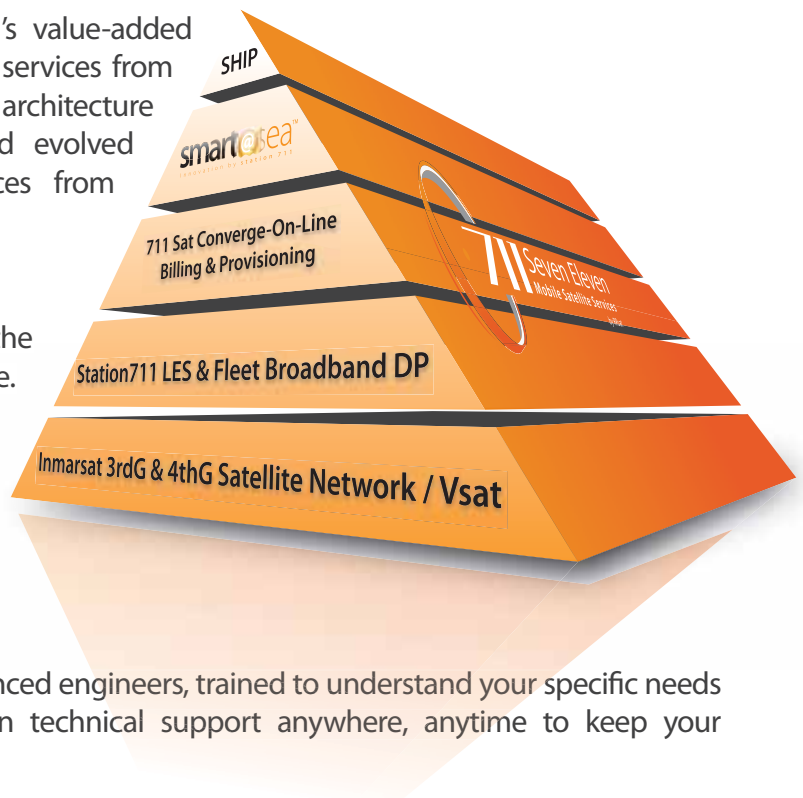

Station711 Introduction

Station 711 is the mobile satellite arm of RRsat global communications network Ltd. (NASDAQ: RRST). Station 711 provides communications solutions to the maritime, terrestrial and aviation markets. As Inmarsat's 4th generation distribution partner, with our own LES for existing and evolved Inmarsat services, and via our own global teleports and fiber optics network, Station 711 has you covered to guarantee seamless global communications anywhere, anytime. The Station 711 platform, based on the most advanced technologies, can be integrated into your existing communications infrastructures. This unique capability results in significant cost and resource savings.

Connect to the Future by using Station 711's value-added services and products. Station 711 provides all services from satellite links to onboard application layers. This architecture enables smooth migration from existing and evolved services to emerging 4th generation services from Inmarsat, VSAT and all other MSS networks .

Enjoy the Freedom to communicate at sea, in the air and on ground as easily as from your office. Station 711 lets you standardize your operations on both ends of the sat-com link – without the need for custom, PC-based client installations. This innovative approach makes communications as efficient as it is cost-effective.

Get Personal Service from Station 711's experienced engineers, trained to understand your specific needs and offer you the right solutions. Depend on technical support anywhere, anytime to keep your communications network live.

Station711 Services & Solutions

Whatever your business, we cater to your communications requirements. Station 711 provides a comprehensive range of mobile satellite communications solutions, including customized packages tailor-made to your specifications and requirements.

Satellite Airtime brings you a complete offering of airtime services. Choose from cutting-edge satellite communications with Inmarsat's 4th generation service, Inmarsat's existing and evolved services, and services from VSAT and other MSS networks. A single unified platform manages your satellite communications smartly and efficiently.

Smart@sea is a comprehensive suite of value-added products and services for your commercial and your crew's online use. Smart@sea secures your communications work environment while maintaining productivity, simplifies controlled onboard operations, and puts your crew in touch with their family and friends – all at reduced costs.

Sat Converge, a unified network platform, provides a single point of management for all satellite communications – from Inmarsat 3rd and 4th generation through VSAT and other satellite links. Sat Converge enables terrestrial-based networking management, Unified Threat Management (UTM) and monitoring.

Direct VoIP, an advanced terrestrial-to-satellite VoIP system, substantially reduces shore2ship communications costs (up to 80%) while simplifying communications between your fleet at sea and personnel on shore. Services are available from office PBXs, mobile phones and PCs via a direct link or two-stage dialing.

Unified Messaging consolidates text messaging options to keep your vessel online around the clock. It offers your staff fax2mail, mail2fax and mail2sms services.

CrewNet addresses your crew's need to stay connected while at sea with a suite of products. They can choose from prepaid voice and data services (including emailing, web browsing and chatting), news services and much more.

Self Management enables Station 711's partners and customers to manage and monitor their own satellite communications. An online web interface offers powerful service commission tracking, spending control, archive and real-time viewing of call data records – all customizable to meet your requirements.
