Your MSS Management & Control Toolset

Take advantage of our expertise and expand your portfolio without the initial investment. Station711's **DPlatforms** solution allows you - Inmarsat distribution partners, VNOs and service providers, to offer your customers a more complete service package with DPlatforms advanced co-branded management & control toolset.

Virtual Network Operator Services

Station711's **DPlatforms** provide a full range of customized management & control tools for Inmarsat 3rd & 4th generation services. Simple web-based administration interfaces allow Virtual Network Operator (VNO), service providers, customers and end-users comprehensive and dynamic self management solutions

tailored to their specifications and requirements. **DPlatforms** toolset includes financial management tools providing credit risk limitations, email notification alerts etc, and end-user management tools providing firewall settings, email black & white lists, and **much more.**

Tools and Services

Provisioning

Manage your SIM cards and service restrictions. Direct access to manage own inventory and perform real time provisioning using frontend interface - activate, deactivate, suspend and resume SIM cards and get a traffic overview of all the customers and terminals usage.

Spending Control

Receive notifications regarding subscriber balance. Monitor and manage spending related notifications for required periods and different levels. High spending notifications can be sent directly to the different levels including the end users.

Usage Control

Set Daily, Weekly or Monthly different usage limitations and notifications. Usage can be monitored by data, voice and SMS messages. High usage notifications can be sent directly to the different levels including the end users.

Hierarchy Access Level

Manage all accounts and SIM cards under one platform and provide your costumers and their subscribers limited access to their accounts to get real time traffic data and to manage their own triggers.

Billing

View and monitor reseller, company or subscriber bills - detailed or summarized. Download traffic and billing data for any custom time period as well as for specific customers or terminals. Billing on several levels at the same time - different pricing can be set for each level.

Pre-Paid Services Management

A complete Prepaid and Voucher management environment. Manage crew card vouchers and balances, top up prepaid voucher, assign vouchers and prepaid levels, monitor prepaid low credit notifications, extract traffic details and complete redeem history.

Firewall Settings

Configure your own set of firewall rules based on IP protocol. Restrict application by port, protocol, server IP address and malicious Content. Comprehensive Malware Protection for all common tunneling protocols including PPTP, L2TP, IPSec, SSL. Proxy-based antivirus databases protection against viruses, spyware, and other types of malware attacks in web, email, and file transfer traffic.

Firewall authentication

Apply Security policy authentication to users or groups logging on to a network. Identity-based policies (IBP) performs user authentication to enforces Role Based Access Control (RBAC) to organization's network and resources. Schedule and assign different UTM security profiles.

URL Black & White List

Protect or limit your users' activity on the web. limit access to web sites by category, block your network users from access to URLs that you specify, implement web content filtering based on words and phrases . Decrease the size of unwanted traffic causing dramatic cost reduction.

Email Black & White List

Block or allow emails filtered according to address, domain or message size. Allows to decrease unwanted personal, operation and commercial traffic causing dramatic cost saving.

Monitor Online Terminal Traffic

Monitor and manage data connections. Access all traffic in near real time across all services - traffic data, customer data, reports, real time provisioning, monitoring and management of spending and usage in real time.

Customized Web-Based Solutions

Provide your customers with our fully-hosted Web-based portal and let them feel at home with your branding. The solutions are fully CSS controlled and can be delivered in different layout options if required for a large scale projects.
